

TalentBeat – Logistics:

TalentBeat provides supply chain management and logistics solutions to manage profitability under complex requirements and streamline business operations within the supply chain.

TalentBeat SCM (Supply Chain Management) & Logistics meets the requirements with specialized functionality that takes into account the different supply chain perspectives and unique business challenges of **Freight Forwarders, Warehouse & Distributors, Manufacturers and Transportation & logistics service providers.**

Our comprehensive SCM & Logistics delivers the solution with best practices and low total cost of ownership, that match all business priorities from network design/order inception to delivery-from concept to customer.

SCM & Logistics Solutions:

Our SCM & Logistics solution comprises the following key components:

- **Planning and Forecasting** – Any organization in the changing world requires sophisticated tools that enable anticipation of supply and demand scenarios. Further, accurately predicting these inventory requirements lead to efficient cash flow thus reducing working capital. It covers following:
 - **Demand forecasting** – Predict demand for the product level and plan supply requirements.
 - **Multi-channel planning** – Gain visibility across web, catalog and store channels to increase efficiency.
 - **Financial planning** – Plan for the financial aspects of the inventory
 - **Assortment planning** – Right mix of products or assortments to meet financial goals.
 - **Store clustering** – Clustering stores by customer profile, size, locations or other characteristics.

- **Inventory Optimization** – Optimum availability of inventory at every point in the supply chain: -
 - **Replenishment** – Turn inventory faster
 - **Multi-level** – Manage forecasting and replenishment across all distribution levels / channels
 - **Vendor management** – Sharing inventory data with suppliers to manage timed production and shipments
- 
- **Order life-cycle management** – Order life-cycle starts when a customer places an order via – at store, online, call center or IVR and ends when the product gets delivered.
 - **Distributed order management** – Gives the global view of inventory at the supplier, in transit or at the warehouse
 - **Reverse logistics management** – Identify returns management, capture customer information and their reason for returns comes under reverse logistics
 - **Collaboration gateway** – Customers and stores can track their own orders online
- **Transportation life-cycle management** – Delivering the right products to the customers at the right time is the transportation life-cycle.
 - **Transportation procurement** – To identify the right carriers and right modes at the best prices.
 - **Transportation Planning and execution** – Manage all transportation activities, co-ordinate, re-direct and stay on schedule.
 - **Logistics gateway** – Share critical data in real-time to keep transportation partners working together.
 - **Fleet management** – Manage and control all the activities of fleet operations
 - **Audit, Payment and Claims** – streamlines the processing of freight invoices, payments and reconciliation.
- 
- **Distribution management** – Distribution extends from supplier's loading docks to the customer's front door
 - **Warehouse Management** – More efficient layout, well utilized resources and streamlined inventory.

- **Labor Management** – Maintaining standards throughout the operations to reward quality and safety
- **Billing Management** – Flexible activity-based solution, using time-based rules, to streamline cost tracking and analyze cost data.
- **Supplier enablement** – Supply chain capabilities for suppliers and automate communications & record-keeping. Generate purchase orders, advance ship notices, bar-coded shipping labels & other forms – online.

Features and Benefits:

Supply chain management and Logistics solution facilitates Freight forwarders, Warehouse & Distributors and Manufacturers to enhance their business operations by providing unique capabilities:

- SCM & Logistics planning and forecasting allows businesses to create, modify and track their financial, assortment and promotional plans for each channel.
- The solution minimizes data-entry errors which are peak in over demands and declines in case of adverse conditions.
- Forecast correctly and adjust plans quickly, so that inventory consumes less working capital while end-customers receive more of what they want.
- The solution enable channel-specific service levels so that internet, call center and stores orders can be filled from any sources.
- Share real-time inventory data to manage production and shipments across every point in the entire value chain.
- The solution automates return activities to maximize your credit from suppliers, simplify refunds to customers, and return inventory to your shelves for quick resale.
- Establish return process with special considerations such as custom-tailored apparel, personalized items or electronics.
- Transportation management helps clients to reduce costs, re-route around trouble spots and co-ordinate deliveries to reach faster with less money involved.
- Establish the strong network between suppliers and customers, which facilitates faster order processing in the supply chain.
- Logistics solution enables Freight forwarders, Warehouse & distributors and Manufacturers to move products faster and more accurately – for happier customers and less happy competitors.

TalentBeat in Logistics:

In Logistics we have successfully implemented Logistics Management solution – **whizSCM**.

whizSCM is a logistics solution which gives brokers a facility to raise ship orders for their clients and create a consolidated shipment out of it and assign it to appropriate Carrier Company. There can be different entities that can access this system like 3rd party logistics, General Client, Carrier, etc.

whizSCM has various modules under the Logistics domain, these are as follows:

- **Order Management Module –**
 - Taking orders from the customers and maintaining their database
 - Generate shipping orders for brokers
 - Distributed order management – Manage inventory at the supplier, in transit or at the warehouse at different locations
 - Brokers and carrier companies can track their orders online
- **Transportation Management Module –**
 - Identify the right carriers and right mode of transport at the best prices
 - Manage all transportation activities, co-ordinate, re-direct and stay on schedule
 - Manage and control all the activities of logistics operations
 - Identify the status of goods in transit, at the origin or at the destination
- **Accounting Module –**
 - Manage and control all accounting and financial activities
 - Keep a track on the Account Payables and Account Receivables
 - Facility to manage Multiple-currency options
- **Tariff Module –**
 - Brokers can bid for the tariff
 - They can create their own tariff
- **Reporting Module –** Generate various reports based on the individual requirements:
 - **Status reporting** – Status of the goods in transit, shipment distance, time to reach destination etc
 - **Carrier history** – Detail reports based on the carriers availability
 - **Ad-hoc reports** – all types of miscellaneous reports according to customer's requirements

Benefits in a nutshell:

- Lower logistics and transportation costs
- Increase asset turnover
- Reduce inventory carrying costs
- Manage growth and expansion to improve revenues and market share
- Improve customer service to enhance competitiveness
